Clinical and Community Action to Address Postpartum Hemorrhage

**GOVERNMENT SUPPORT**
Advocate with government officials to promote enabling policies

**CLINICAL INTERVENTIONS**
Prevent PPH through the routine application of AMTSL
Identify hemorrhage through accurate estimation of blood loss
Manage PPH by:
- Identifying the cause of hemorrhage
- Replacing fluids to prevent shock
- Using uterotonicics as appropriate
- Applying the NASG when shock occurs
- Replacing blood and performing surgery

**COMMUNITY ENGAGEMENT**
Organize communities to develop emergency transportation systems
Mobilize communities to recognize the danger of PPH and excessive blood loss, and actively engage in healthy behaviors
Empower families for safe delivery
