Pathfinder is striving for a world free from stigma, discrimination, and HIV-related morbidity and mortality.

For over 25 years, Pathfinder has contributed greatly to the global HIV pandemic response, integrating HIV services with other sexual and reproductive health interventions, recognizing the opportunity to meet people's needs in a single visit.

Our HIV prevention, care, and treatment work has spanned 10 countries, and entailed an evidence-based, rights-based, and gender-responsive approach. Pathfinder’s current programs advance the integration of HIV care into the primary health care system through integrated community and health systems strengthening.

**STRATEGIES**

**Quality, people-centered HIV care:** Ensuring that supported countries implement people-centered, evidence-informed, quality, and comprehensive HIV interventions.

**Promoting equity:** Focusing on reducing inequity and achieving inclusivity, considering age, poverty, residence, and other disruptions to care.

**Gender-transformative:** Ensuring that people, regardless of their gender identity, can exercise their rights and access the HIV services they are eligible for.

**Sustainability:** Partnering with governments to ensure they take the lead in HIV program implementation, allowing for continuity of interventions at scale and beyond the life of projects.

**Innovation:** Demonstrate the effectiveness of innovations, including new products and digital technologies, and options for self-care.

**PATHFINDER IMPACT IN FISCAL YEAR 2020**

"I feel good, I'm properly complying with the medication. I like activists and supervisors because they actually visit me and advise me."

- Rogério Salomão Mondlane
Pathfinder offers a strategic mix of behavioral, biomedical, and structural HIV prevention interventions tailored for local context and the needs of different populations. These populations include adolescent girls and young women, high risk boys and young men, key populations, people in HIV sero-discordant relationships and those within prison settings.

**Highlight: Efficiencies for Clinical HIV Outcomes (ECHO), Mozambique**

The ECHO project is providing pre-exposure prophylaxis (PrEP) to HIV-negative clients at substantial risk of HIV infection. ECHO is scaling up PrEP through assignment of a PrEP focal point in each PrEP health facility; close collaboration with community partners for PrEP referrals, data sharing, and demand creation; and, deploying mobile brigades to areas with high HIV prevalence, in coordination with PASSOS, a community partner.

Pathfinder strengthens integrated community and health systems for sustainable HIV and AIDS service delivery. This includes investing in improved supply chain systems and commodity security; an adequate and well-trained workforce; and robust monitoring and evaluation systems that provide data for decision making. Pathfinder also works with partners to increase domestic financing for HIV and AIDS prevention and control.

**Highlight: Optimizing HIV investment for Impact, Nigeria**

Between July 2019 and December 2020, Pathfinder Nigeria worked with the Ministry of Health and state structures to strengthen HIV prevention among pregnant and breastfeeding mothers. During the project, Pathfinder identified over 1,000 HIV-positive pregnant women and initiated all of them on antiretroviral medications.

Pathfinder creates an enabling environment for sustained access to HIV and AIDS interventions by enhancing good governance practices and accountability mechanisms. We work within policy and public health discussions, occurring among subnational and national platforms, and globally.

**Highlight: Bridging the Gaps, Mozambique**

Since 2017, the Bridging the Gaps project has worked with Mozambique’s Ministry of Interior to develop and implement a national approach to addressing key populations’ needs. The project is addressing legal barriers facing sex workers, people who use drugs, and lesbian, gay, bisexual, transgender and queer (LGBTQ) populations—who are disproportionately affected by HIV. The project developed a police manual to address issues affecting key populations and facilitated a police officer training of trainers program that will be scaled up across the country.

Pathfinder promotes efficient testing—in communities, facilities, and hotspots—so people know their status and can initiate treatment as early as possible.

**Highlight: Afya Pwani, Kenya**

Pathfinder has supported HIV self-testing in Kenya since 2019 as part of the Afya Pwani project. Between October 2019 and March 2021, over 11,000 HIV self-test kits have been distributed, majority of these to people younger than 30. Pathfinder continues to strengthen distribution of HIV self-test kits, with a strong focus on adolescents and youth as well as men.
